

HLA Nomenclature Format Impact Checklist

We have provided a checklist of questions that will help identify potential impacts that the HLA Nomenclature format change will have on your lab.

Management Systems

- How will your database and other non-One Lambda software have to be modified to accept the new HLA nomenclature format version 3?
- The new HLA nomenclature format will affect the way data is sorted and searched for, are you aware of all the changes and how the new nomenclature will be presented?
- Is your HLA laboratory management software system (ie. Histotrac) updated with the new nomenclature format?
- Has your staff been trained on the new management software system?

Software Applications

- Does your software accept/output alleles or files that contain alleles?
- Is software functionality affected by allele names?
- Will lookup, product identification or reporting be affected by the change?

Internal Procedures

- Does your internal SOPS/work instructions need to be changed to comply with the change?
- Has your staff been trained and understand all the changes involved with the HLA nomenclature format change?
