How to Use Computer Audio

1. Click on Communicate at the top left corner of the event window, then click on Connect to audio icon.
2. Or, in the Quick Start menu, look for the circle with a phone icon. Click on the **"More Options"** button underneath it and select **"Call using Computer."**

Troubleshoot Computer Audio

3. Refer to step 2, then click on "Change Settings" to open the computer audio settings. Use the dropdown menus to select the appropriate headphones or speakers.

4. Test your computer's audio. You should be able to hear the music in your headset or headphones. When speaking, please check that the microphone level seems reasonable (1/4 - 1/2 of the bar when speaking normally).
5. After you've confirmed that your audio is working correctly, click **Call Using Computer** to connect your audio to the meeting in progress.
